

Harnessing Opportunities and Planning for the Renewable Energy Transition in New Mexico

Both broadband expansion and renewable energy transition are at crucial junctures for the state of New Mexico, and there is a concerted effort to ensure their establishment community led connected. How has the state worked to help reimagine control of some of the largest utility sectors (internet and energy) into the hands of the community? This panel links the renewable energy transition to planning work in New Mexico.

APA core competencies include:

4. Plan Making
 - f. Problem Solving
 - g. Interrelationships
5. Plan Implementation and Placemaking
 - i. Preservation, Conservation and Reuse
