

Post-Pandemic Workplace Models and Potential Impacts to Office Parks

The pandemic shifted many professionals to working at home. As we emerge from the pandemic, many companies are permanently shifting their workplace models. According to a New York Times article, “Kate Lister, president of Global Workplace Analytics, expects more than 25 percent of employees to continue working from home multiple days a week, up from fewer than 4 percent who did so before the pandemic.” This panel explores the impact of this shift in workplace models for the future of office spaces and office parks. The discussion will focus on innovative design strategies being utilized to rethink to reimagine office spaces post-pandemic. It will also explore how the shift in office demand might impact the traditional office / employment parks.

APA core competencies include:

2. Research, Technical and Analytical
 - b. Quantitative and Qualitative Methods
 - c. Demographics and Economics
7. Management
 - h. Strategic Planning
9. Relevancy and Professional Commitment
 - c. Emerging Issues
