

Sustainability and Equity through Historic Preservation

The reuse of existing buildings within all communities is a means for building strong communities that value a community's past while planning for its future. Perhaps the most sustainable way to think of a community's built environment is to acknowledge those resources they already have. This presentation will look at the interrelationship between, historic resources and their reuse, as combined with community planning objectives, providing affordable housing, enabling marginalized communities to recreate their communities, and job training.

APA core competencies include:

3. Communication and Interaction
4. Plan Making
5. Plan Implementation and Placemaking
6. Leadership
8. Integrity, Values and Ethics

Presenters:

Leslie Naji, Senior Planner for Historic Preservation, lnaji@cabq.gov. Architect, community planner, and historic preservation planner actively working to build stronger, resilient community through embracing and restoring existing buildings that make up communities.

Sonora Rodríguez currently works as a Planner at the City of Albuquerque.
